

**BEND MULTIMODAL COUNT PROGRAM
TAC MEETING #2 1/21/16**

- Objectives
 - Identify key corridors or projects
 - Create a long term count program that will meet the needs of many efforts
 - Prioritize count corridors or projects
 - Determine count frequency recommendations

- Multimodal traffic data is needed for:
 - Assessing the effectiveness of multimodal improvements
 - Pursuing grants
 - Informing council priorities
 - Providing input to a variety of planning activities
- This project will define and implement the City's multimodal count program

- Comments Received - Transit Agency

- Highest Priorities

- bike and pedestrian corridors that overlap with transit corridors would be our top priorities. Hawthorne station, Greenwood Ave, 3rd Street, and 27th Street.

- How they would use the data:

- safety of our riders getting to and from bus stops and help us to better determine the accessibility issues near our bus stops.
 - grant funding opportunities on innovative mobility strategies to solve the last mile
 - determine if further infrastructure is needed like bike racks.
 - Outreach- knowing where there is a lot of foot traffic clues me in that it could be a potential hotspot for advertising CET and/or encouraging the area neighborhood, business, etc with high bike/ped numbers to utilize transit if there are low boardings on a transit corridor.

- Frequency of data:

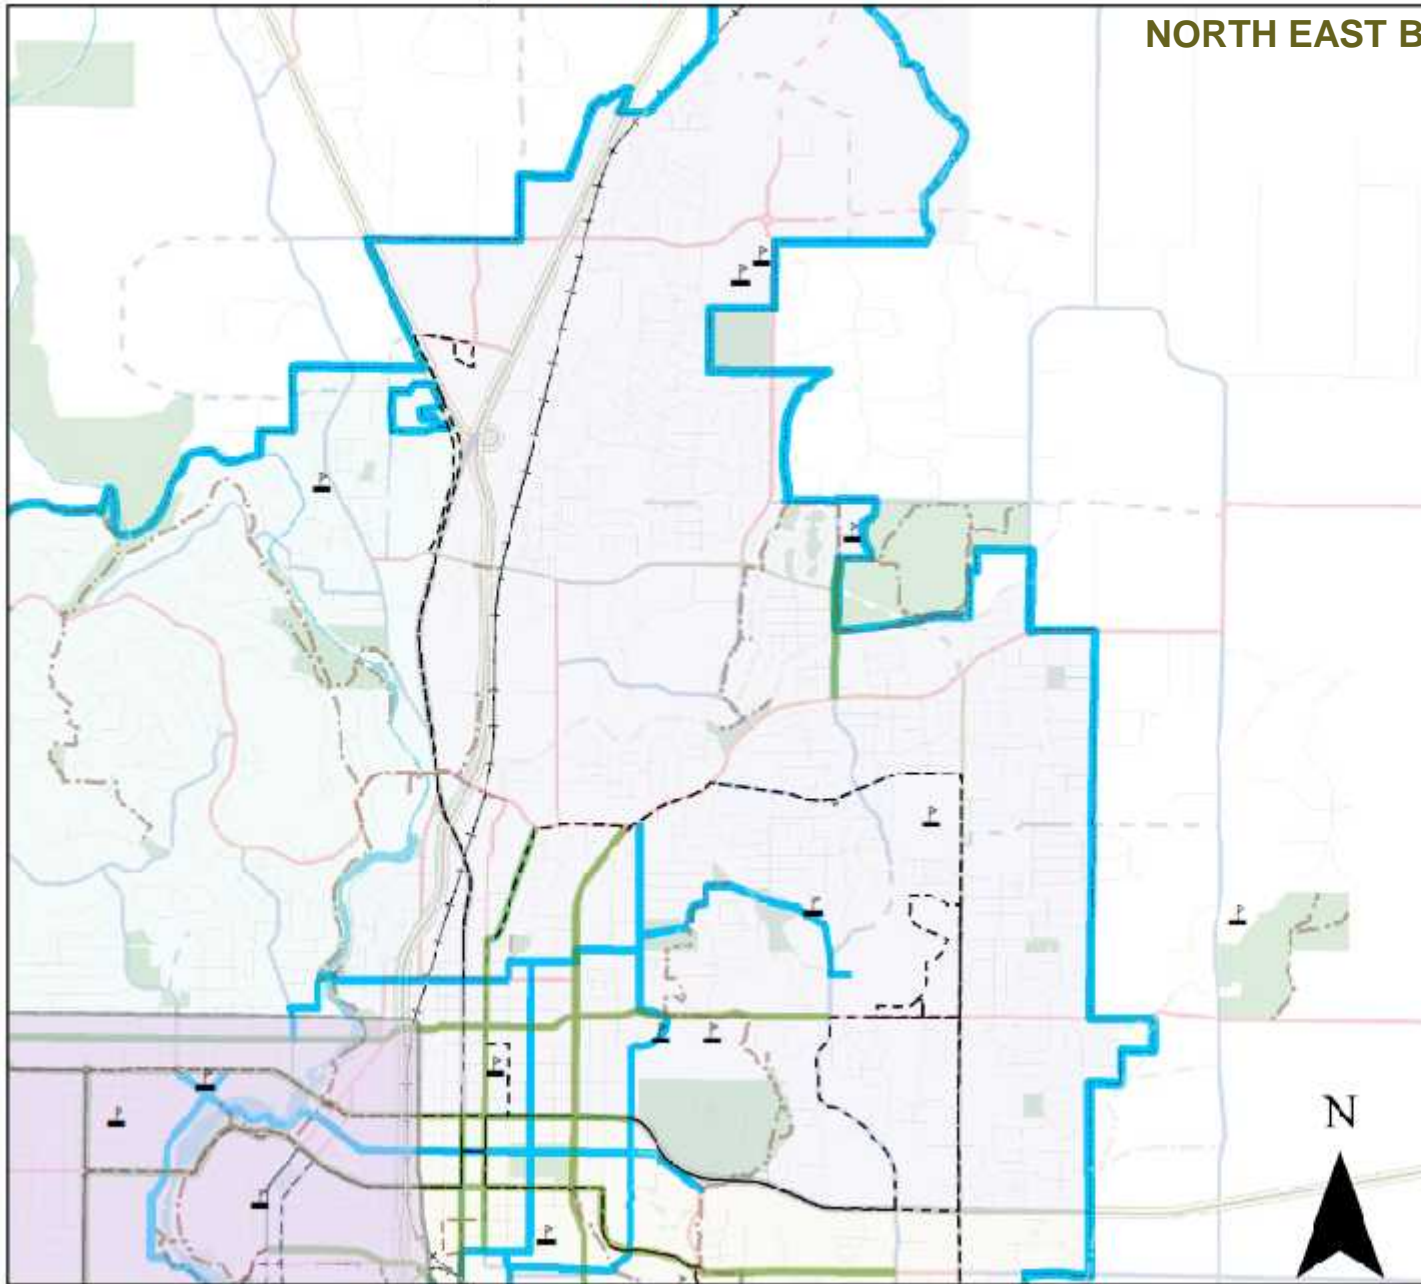

- by month or season
