		ectors are needed or added after this agreement is completed, please attach a separate document listing submit to the Building Safety Division.
		pared surface of structural members to be sprayed shall be inspected before the ion of the SFRM.
		ion in accordance with the manufacturer's written instructions of ambient temperature and after application, substrate conditions, and protection provided.
		nation of the thickness of SFRM in accordance with ASTM E 605 as required by the differences of the difference of the di
	S m	loor, roof, and wall assemblies shall have sampling for determining the thickness of FRM shall be determined in accordance with ASTM E 605 making not less than 4 neasurements per 1,000 sq ft of the sprayed area of each floor or part thereof in each tory.
	Α	cellular deck shall have sampling of the SFRM thickness in a 12 inch by 12 inch area. In minimum of 4 measurements shall be made, located symmetrically within the square rea.
	□ F 1: sy	luted decks shall have sampling of the SFRM thickness in a selected square area of 2 inches by 12 inches. A minimum of 4 measurements shall be made, located ymmetrically within the square are, including one each of the following: valley, crest nd sides. The average shall be reported.
	in	structural members shall have sampling for determining the thickness of SFRM shall be a accordance with ASTM E 605 and not less than 25 percent of the structural members in each floor.
		eam and girder samplings of SFRM thickness shall be made at 9 locations around the eam or girder at each end of a 12 inch length.
	e	oist and truss sampling shall be made at seven locations around the joist or truss at ach end of a 12 inch length.
	e	Vide-flanged column sampling of SFRM thickness at 12 locations around the column at ach end of a 12 inch length.
_	m	lollow structural section and pipe column sampling of SFRM thickness shall be a ninimum of 4 locations around the column at each end of a 12 inch length.
	approve	nation of the density of SFRM in accordance with ASTM E 605 as required by the dire-resistant design.
	le	loor, roof, and wall assembly density sampling shall be each floor at the rate of not ess than one sample for every 2500 square feet or portion thereof of the sprayed area a each story.

	Ц	beams, girders, trusses, and columns density sampling shall be at a rate of not less
		than one sample for each type of structural member for each 2,500 square feet of floor
		are or portion thereof in each story.
		mination of the bond strength in accordance with ASTM E 736 of cured SFRM applied to
	floor,	roof, wall assemblies, and structural members shall not be less than 150 psf.
		Bond strength sampling for floor, roof or wall assemblies for SFRM shall be each floor,
		roof, and wall assembly at a rate of not less than one sample for every 2,500 square
		feet of sprayed area, or portion thereof, in each story.
		Bond strength sampling for SFRM shall be selected from beams, girders, trusses,
		columns, and other structural framing members at the rate of not less than one sample
		for type of structural member for each 2,500 square feet of floor area or portion thereof
		in each story.
		Bond tests for primer, paint, and encapsulant bond tests shall be conducted when the
		SFRM is applied to a primed, painted or encapsulated surface for which acceptable
		bond-strength performance between these coatings and the SFRM has not been
		determined.

# **Schedule H – Contractor's Statement of Responsibility for Seismic Resistance** (OSSC 1704.4)

Application Number

Per Section 1704.4 of the Oregon Structural Specialty Code, the contractor responsible for the construction of a main wind or seismic force resisting system, designated seismic system or a wind or seismic resisting component listed in the statement of special inspections (structural tests and inspection schedule and as noted on the Building Safety Division approved plans) shall submit a written statement of responsibility to the Building Official and the owner prior to the commencement of work on the system or component.

### Acknowledgement

To comply with the requirements of Section 1704.4, the contractor acknowledges the following:

- The contractor is aware of the special requirements contained in the statements of special inspections (structural tests and inspection schedule and as noted on the Building Safety Division approved plans) prepared by the engineer of record or the registered design professional per the requirements of Section 1704.3 of the OSSC.
- 2. Control will be exercised to obtain conformance with the construction documents approved by the Chief Building Official.
- 3. The contractor has procedures for exercising control within the contractor's organization, the method and frequency of reporting, and the distribution of the reports.
- 4. The contractor has the qualified personnel to exercise such control.

Description of designated building main wind or seismic systems and main wind or seismic components included in the Statement of Responsibility:					
Contractor Name	Signature	Date			
Notes:					

## Schedule I – Special Inspections for Seismic Resistance (see OSSC Section 1705.13) Structures in Risk Category III and IV unless specifically exempt by the exceptions of 1704.2. Agency Name Application Number Individual Special Inspector Name(s) \*If additional inspectors are needed or added after this agreement is completed, please attach a separate document listing those names and submit to the Building Safety Division. ☐ Seismic-force-resisting systems in structures assigned to Seismic Design Categories C, D, E or F: Inspections for structural steel in accordance with the quality assurance requirements of AISC 341 CH. J section J5 (Inspection Tasks), OSSC 1705.2 and Table 1705.2 (attach **Schedule A**). 1705.13.1.2 ☐ Continuous inspection for structural wood required during field gluing operations of element of the seismic force-resisting system. 1705.13.2 ☐ Periodic inspection of structural wood required for nailing, bolting, anchoring and other fastening of components with the seismic force-resisting system with fastener spacing 4 inches on center or less, including wood shear walls, wood diaphragms, drag struts, braces, shear panels and hold-downs. 1705.13.2(2) ☐ Periodic inspection is required for cold-formed steel light-frame construction during welding operations of elements of the seismic force-resisting system. 1705.12.2 ☐ Periodic inspection is require for cold-formed steel light-framed construction for screw attachment, bolting, anchoring, and other fastening of components within the seismic for-resisting system, including shear walls, braces, diaphragms, collectors (drag struts) and hold-downs. (Only required if sheathing is not gypsum board or fiberboard and is wood or steel sheets with fastener spacing that is less than 4 inches on center. 1705.13.3 ☐ Designated seismic systems requiring seismic qualifications per OSSC 1705.13.4. Construction documents shall specify the requirements for certification by analysis, testing or experience data for nonstructural components and designated seismic systems per ASCE 7 section 13.2.2, where such certification is required by OSSC 1705.13.4 in structures assigned to Seismic Design Categories C, D, E or F: ☐ Periodic verification of labeling, anchorage or mounting systems conform to the certificate of compliance (for anchors attach **Schedule G**).

psf (for anchors attach Schedule G).

Design Categories D, E or F (1705.13.5):

☐ Architectural components in structures more than 30 ft in height and assigned to Seismic

☐ Periodic inspection during erection and fastening of exterior cladding, interior and

exterior nonbearing walls weighing more than 15 psf or veneer weighing more than 5

	☐ Periodic inspection during the anchorage of access floors (for anchors attach <b>Schedule G</b> ).
	<ul> <li>□ Periodic inspection of the installation and anchorage of suspended ceiling systems (for anchors attach Schedule G).</li> </ul>
	Plumbing, mechanical and electrical components in structures assigned to Seismic Design
	Categories C, D, E or F (1705.13.6):
	<ul> <li>Periodic inspection during anchorage of electrical equipment for emergency or standby power systems (for anchors attach <b>Schedule G</b>).</li> </ul>
	<ul> <li>Periodic inspection is required during the anchorage of other electrical equipment in structures assigned to Seismic Design Category E or F (for anchors attach <b>Schedule</b> <b>G</b>).</li> </ul>
	Periodic inspection during the installation and the anchorage of piping systems carrying hazardous materials and their associated mechanical units (for anchors attach <b>Schedule G</b> ).
	☐ Periodic inspection during the installation and the anchorage of HVAC ductwork that will contain hazardous materials (for anchors attach <b>Schedule G</b> ).
	☐ Periodic inspection during the installation and anchorage of vibration isolation systems where the construction documents require a nominal clearance of 0.25" or less between the equipment support frame and restraint (for anchors attach <b>Schedule G</b> ).
	Storage racks in structures assigned to Seismic Design Category D, E, or F (1705.13.7):  □ Periodic inspection for storage rack anchorage 8 ft or greater in height (for anchors attach <b>Schedule G</b> ).
	Periodic inspection during fabrication and installation of seismic isolator units and energy dissipation devices that are part of the seismic isolation system (1705.13.8).
Notes	

## Schedule J – Testing and Qualification for Seismic Resistance Agency Name Application Number Individual Special Inspector Name(s) \*If additional inspectors are needed or added after this agreement is completed, please attach a separate document listing those names and submit to the Building Safety Division. ☐ Testing and qualification specified in OSSC 1705.14.1 through 1705.14.4, unless exempt from special inspections by the exceptions of 1705.14.1.1 for seismic-force-resisting systems in structures assigned to Seismic Design Categories C, D, E or F: ☐ Verification of certified mill test reports for each shipment of reinforcing steel complying with ASTM A 615 used to resist earthquake induced flexural and axial forces in special moment frames, special structural walls and coupling beams connecting special structural walls, in structures assigned to Seismic Design Category B, C, D, E, or F, the reinforcement shall comply with ACI 318 section 21.1.5.2. ☐ Chemical tests in accordance with ACI 318 section 3.5.2 to determine weldability of ASTM A 615 reinforcing steel. ☐ Testing for structural steel as required by AISC 341 quality assurance OSSC 1705.2.1.1. See exception in OSSC 1705.13.1 for structures in Seismic Design Category C. ☐ Ultrasonic testing for discontinuities behind and adjacent to welds after joint completion where subject to through-thickness weld shrinkage strains in base metal thicker than 1.5". Acceptance criteria for nondestructive testing shall be as required in ASTM A 435 or ASTM A 898 (Level 1 criteria) as specified by the registered design professional on the construction documents. ☐ Designated seismic system in structures assigned to Seismic Design Category C, D, E, or F and subject to the certification requirements of ASCE 7 section 13.2.2 and comply with OSSC 1705.13.4. ☐ Active mechanical and electrical equipment that must remain operable following the design earthquake ground motion shall be certified exclusively on the basis of approved shake table testing in accordance with ASCE 7 section 13.2.5 or data in accordance with ASCE 7 section 13.2.6. ☐ Components with hazardous substances and assigned an importance factor >1.5 in accordance with ASCE 7 section 13.1.3 shall be certified by the manufacturer as maintaining containment following the design earthquake ground motion by analysis, approved shake table testing in accordance with ASCE 7 section 13.2.5, or data in accordance with ASCE 7 section 13.2.6. ☐ Architectural mechanical and electrical components in structures assigned Seismic Design Categories C, D, E or F and where the requirements of ASCE 7 section 13.2.1 item 2 are met by submittal of manufacturer's certification and comply with OSSC 1705.13.6:

of	anufacturer's certification that the component is seismically qualified by one or more the following and as specified by the registered design professional on the onstruction documents:
	□ Analysis
	<ul> <li>☐ Testing in accordance with the alternative set forth in ASCE 7 section 13.2.5.</li> <li>☐ Analytical method using dynamic characteristics and forces.</li> </ul>
	☐ Experience data in accordance with the alternative set forth in ASCE 7 section 13.2.6.
•	of seismic isolation system components in accordance with OSSC 1705.14.4 and section 17.8.
