

Butler Market & Wells Acres Key Route & Roundabout Project

The City is designing a variety of safer and more accessible bike and pedestrian routes throughout the community, including along Butler Market Road, one of Bend's heavily traveled NE corridors. Making this corridor "key route" safer and more bike and pedestrian-friendly is part of the Transportation GO Bond approved by voters in 2020.

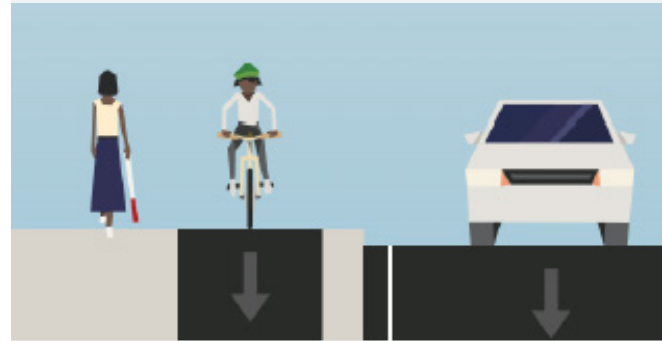

Improving the intersection of Butler Market and Wells Acres Roads has been a priority for the surrounding neighborhoods for many years. A new roundabout at this location will improve safety and efficiency for all modes of travel.

Once complete, the project will deliver a long-desired improvement to intersection safety and time reliability, and provide safer, easier connections for pedestrians and bicyclists traveling between neighborhoods, schools, parks and businesses in the area.

Looking Ahead*

- Design underway through fall 2024
- Utility relocations and right of way acquisition fall 2024
- Construction anticipated to begin winter 2024/2025

*Dates are estimates and subject to change.

Sidewalk-level Bike Lanes

The City has initiated design to include sidewalk level bike lanes and wider sidewalks for the key route bicycle and pedestrian improvements on Butler Market Road.

"Key Route" is a term from the Bend Transportation System Plan that means the route is designed to be "low stress" for pedestrians and bicyclists, to provide safe and appealing connections to schools, parks, and other destinations, as well as for cross-City travel. Examples include off street multi-use paths, buffered, separated, raised and/or painted bike lanes and widened sidewalks.
