Dear CTAC committee members,

As you consider project prioritization criteria for the future of transportation in Bend, I urge to to place high priority on the following two factors:

Reduction of congestion and pollution by implementing projects that will encourage more people to walk and bike for short trips. This includes implementation of sidewalk and bike networks, and safety projects like street lighting.

Reduction of transportation inequality by improving transportation options for low income, disabled, young and elderly people in our community. This can be served in part by better walking and biking networks, and should also include effective bus transit options with frequent service.

Yours sincerely,  
Kim Ely
