

ECONOMIC DEVELOPMENT STRATEGIC PLAN

January 2026

CITY OF BEND

ACKNOWLEDGMENTS

This strategy was developed with insight from the Bend City Council, economic development stakeholders, businesses, and community leaders and partners. We are grateful for the challenging questions raised and direct insights that helped form this plan and forge a new economic development department in the City of Bend.

INTRODUCTION

Guided by the Bend City Council's Economic Prosperity Goal, the City is developing a comprehensive economic development program purposed to make Bend a great place to do business and pursue opportunity, and where the community can prosper. The program will be run by a newly formed department, and in coordination with internal City leadership and inter-departmental teams whose areas intersect with economic development goals.

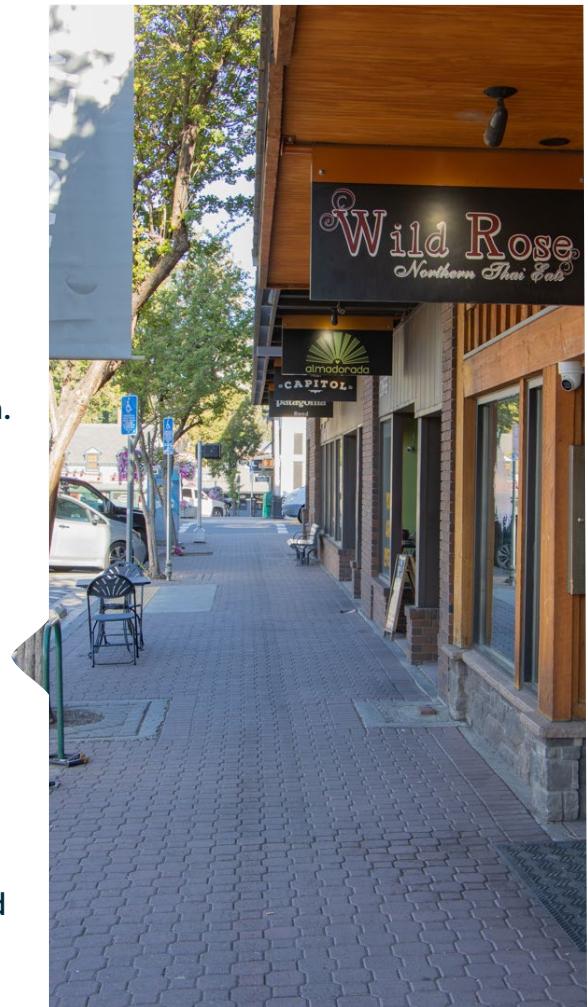

To guide the department's work, this Economic Development Strategic Plan (EDSP) will provide goals, strategies and metrics to build productive and supportive relations with Bend's businesses, and deploy strategies to keep Bend's economy durable and innovative. It will also provide a plan for developing Bend's urban renewal areas, and ensure there are opportunities for quality of life, clear paths for career and earnings opportunities, and improved generational wealth for all Bend residents.

Bend is recognized as one of the fastest growing small metropolitan areas in the country. The City is noted for its high quality of life, outdoor recreation, and scenic environment, attracting businesses and employees alike. Bend is the largest city in the Central Oregon region with a population exceeding 100,000 and a workforce of over 60,000. The local economy includes diverse industries such as aerospace, brewing and specialty beverages, bio and health sciences, value-added manufacturing and outdoor products and recreation. Educational institutions include the Bend-La Pine School District, Central Oregon Community College and Oregon State University-Cascades. This robust education system supports workforce development, business innovation and economic growth.

Despite significant opportunities, Bend, the Central Oregon region and the State of Oregon face barriers to sustained and accessible economic growth. Challenges include strained housing production and affordability, with rising median home prices making Bend one of the least affordable cities in the United States relative to local wages. Increasing threats from wildfires and prolonged droughts are reducing snowpack, jeopardizing regional forests, water resources, recreation and tourism.

These factors, along with other statewide challenges to business, including high business taxes, long permitting timelines and increased regulation have hampered Bend and the state's ability to attract and retain business.

The City's economic plan leverages input and observations from local and state organizations who understand the changing trends and needs of business in Central Oregon. These plans include Governor Kotek's Oregon Prosperity Roadmap, the Business Oregon Strategic Plan, EDCO's Strategic Plan, the region's Community Economic Development Strategy, the East Cascades Works Strategy plan, and others—all completed in late 2025.

INDICATORS OF A CHANGING ECONOMY

State of Oregon, Business Oregon, our Region and the City

INDICATORS

Slowing federal & state economy

Population is stagnating

Regulation & delay are making Oregon uncompetitive

Businesses leaving the state is an increasing threat

Oregon has ineffective incentives to attract and retain business

Workforce is undergoing change

Housing costs remain high & commute patterns are impacting employees, businesses and transportation infrastructure

STRATEGIES

Oregon Prosperity Roadmap

Business Oregon Statewide Economic Development Plan & Incentives Program Update

Regional Strategic Plan Updates - EDCO, East Cascade Works, COIC/CEDS, etc.

CoB Economic Development Department Launch & Strategic Plan

EXECUTIVE SUMMARY

This strategy was informed by data, stakeholder input, state and regional partner strategic plans, and peer city research. It forms a five-year strategic workplan for the newly formed economic development department. The plan reflects the strengths and challenges of Bend's economy, and highlights goals and strategies to retain and grow business, ensure resiliency today and in the future, spur economic growth and community-centered development, and support a changing workforce.

Tracking Trends & Planning for the Next Biennium

This work plan and corresponding strategies comprise the City's 2025-27 Economic Development program budget. Strategies are focused on a five-year horizon and will be updated each biennium. The program will be monitored and adjusted as needed to prepare for the 2027-29 Biennium and beyond. Data trends for economic indicators, labor, housing and more will be tracked to identify trends, inform strategies and monitor success.

Inclusive Stakeholder Feedback & Guidance

This section includes the vision, goals and guiding principles garnered from the stakeholder outreach effort to help form the focus and direction of the EDSP. The initial discovery phase focused on data collection and analysis, drawing from a variety of sources. Plan development was also informed by individual and group conversations, surveys and targeted stakeholder interviews to better understand the needs of business and the City's opportunities and challenges.

The community vision process included multiple forums to bring together a diverse group of voices to define what economic prosperity means for the region's future for the economy and its residents, and strategies to achieve it. To broaden feedback, business and employee surveys were conducted to integrate broader business and workforce perspectives on Bend's economy, City

Bend, where businesses, their employees and the community thrive.

services and strategies to ensure Bend is a place where business and their employees thrive.

The plan development process was inclusive and outwardly focused on informing a plan that is responsive, anticipatory and supportive of Bend's growing business and workforce needs. The City obtained input from a wide variety of business leaders representing a diverse set of industries, and engaged under-represented business owners, entrepreneurs, operators and employees to develop the vision and form the goals and strategies.

Vision

Bend is a leading competitive economic center and best place to do business in the country, with inclusive access to economic opportunities for all.

Goals

Based on council goals, partner economic strategies, economic data and deep engagement with key stakeholders, the strategy identifies five goals to achieve that vision:

- Increase business retention and growth while recruiting target industries for the future
- Build resiliency into Bend businesses and neighborhoods
- Enable inclusive prosperity and access to quality jobs
- Plan for a thriving economy and community of the future
- Leverage and grow urban renewal and investment

Guiding Principles

Input from the EDSP Focus Group and stakeholders culminated in the following guiding principles to support Council goals and help shape the plan's strategies:

- Inclusive economic growth that prioritizes targeted economic and community investments designed to generate measurable opportunities for all residents and workers.
- Customer service that centers decision-making on the needs and experiences of city businesses to ensure responsiveness, transparency, efficiency, and accessibility in all interactions.
- Adaptable and innovative approaches that ensure that policies and investments remain responsive to evolving business needs, market conditions, and community priorities.
- Accountable and Transparent actions that ensure openness in decisions and operations, clear responsibilities, and accessible information for residents and stakeholders.

Outreach Components

BEDAB:	Briefings and feedback from eight months of BEDAB meetings
Focus Groups:	50+ members, wide variety of industries, and businesses owned by underrepresented communities-six sessions
Stakeholder Interviews:	More than 80 individuals
Business Survey:	One survey and ~170 responses

Peer City Learnings

Several peer cities were explored to compare strategies, identify successful programs and inform the formation of the EDSP and the Economic Development Department. Some examples of these findings include programs for business retention and attraction, supporting entrepreneurs, and cultivating urban redevelopment, core commercial areas and neighborhoods.

Additionally, the Economic Development team conducted three site visits with peer city economic development departments, including Vancouver, Washington, Beaverton, Oregon and Gresham, Oregon. Each city had overlapping goals with a variety of approaches to business retention and attraction, urban development and workforce development.

City Economic Development Staffing

The new Economic Development team will be built around the deliverables in the five program goals. The Economic Development Office oversees the department and provides leadership on key initiatives, strategies and development. The Business Development Manager will manage the business retention and growth strategies and small business support. The City has contracted with EDCO to hire a Bend director of recruitment who will co-locate at the city to provide recruitment and assistance with business retention and growth. They will also provide recruiting specifically to targeted industry sectors for placement specifically in Bend's urban renewal areas. An additional hire will likely occur at the end of FY2026 to aid BURA in marketing and delivery.

The economic development team is supported by a number of internal City teams, with specific assistance from the Business Permitting Navigator in the Community Development Department to assist developers and businesses through the City's processes. Additionally, data management team members will provide assistance in monitoring metrics to determine progress of the economic development strategies.

To support the City's economic development team and ensure well-informed implementation of the EDSP strategies, an internal policy team was formed to provide support and a platform to vet strategies and align with council goals. Economic development staff is fully integrated into City planning, operations and delivery.

DATA SUMMARY

Population, Labor, Earnings & Housing Data

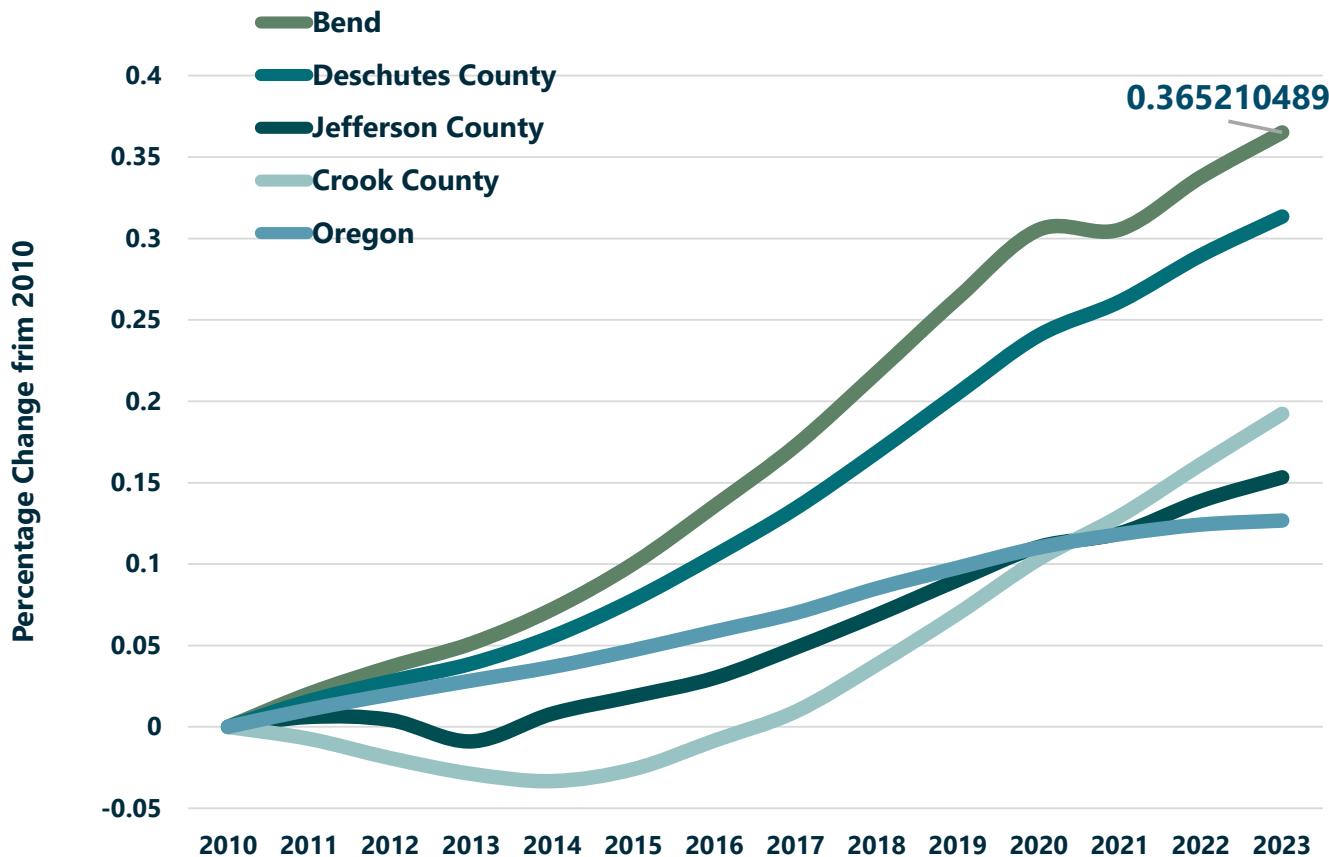

As part of the strategy development process, the City of Bend conducted a comprehensive analysis of economic and social conditions affecting local prosperity and competitiveness. Data sources included the United States Census Bureau, United States Bureau of Labor Statistics, Oregon Employment Department, Implan, CoStar, and Lightcast. The resulting dataset summarizes recent trends and patterns. These findings informed the SWOT Analysis, the 2025 State of Housing and Economy Reports, and the strategies outlined in the Action Plan. A summary of key findings is provided below, with the full reports provided in the appendices.

The following are excerpts from the full economic and housing reports provided in the appendices.

Key Findings

Bend and Central Oregon are the Population Growth Engine of Oregon

Over the past two decades, Bend has solidified its position as Central Oregon's most populous city, with an estimated 2024 population of 104,089. Since 2010, the city has grown at an average annual rate of 2.5%, underscoring its enduring appeal and adaptability.

Bend's Economy is One of The Fastest Growing in Oregon

In 2023, the Bend Metropolitan Statistical Area (MSA), including Deschutes, Crook and Jefferson counties, had about 267,000 residents, reflecting steady growth and rising regional importance. The area's gross domestic product reached \$15.25 billion in 2023, a 41% nominal increase since 2019. This growth makes the Bend MSA one of Oregon's fastest-growing regions. Bend contributed \$11.2 billion, or 74%, of the metro area's total economic output.

Bend continues to experience a substantial trade deficit in goods and services. In 2023, the city recorded a \$2.5 billion imbalance, with \$7.9 billion in exports and \$10.5 billion in imports. Despite persistent trade deficits, Bend's export totals have increased by 18% over the past five years.

Business Investments High & Healthcare Remains Largest Employment Sector

Despite broader and changing economic challenges, Bend continued to attract capital investment, supported by a robust entrepreneurial ecosystem, a high quality of life, and a growing population that sustains diverse industries. In 2024, commercial and industrial investments reached \$93.7 million, the second largest on record, totaling nearly \$500 million since 2019.

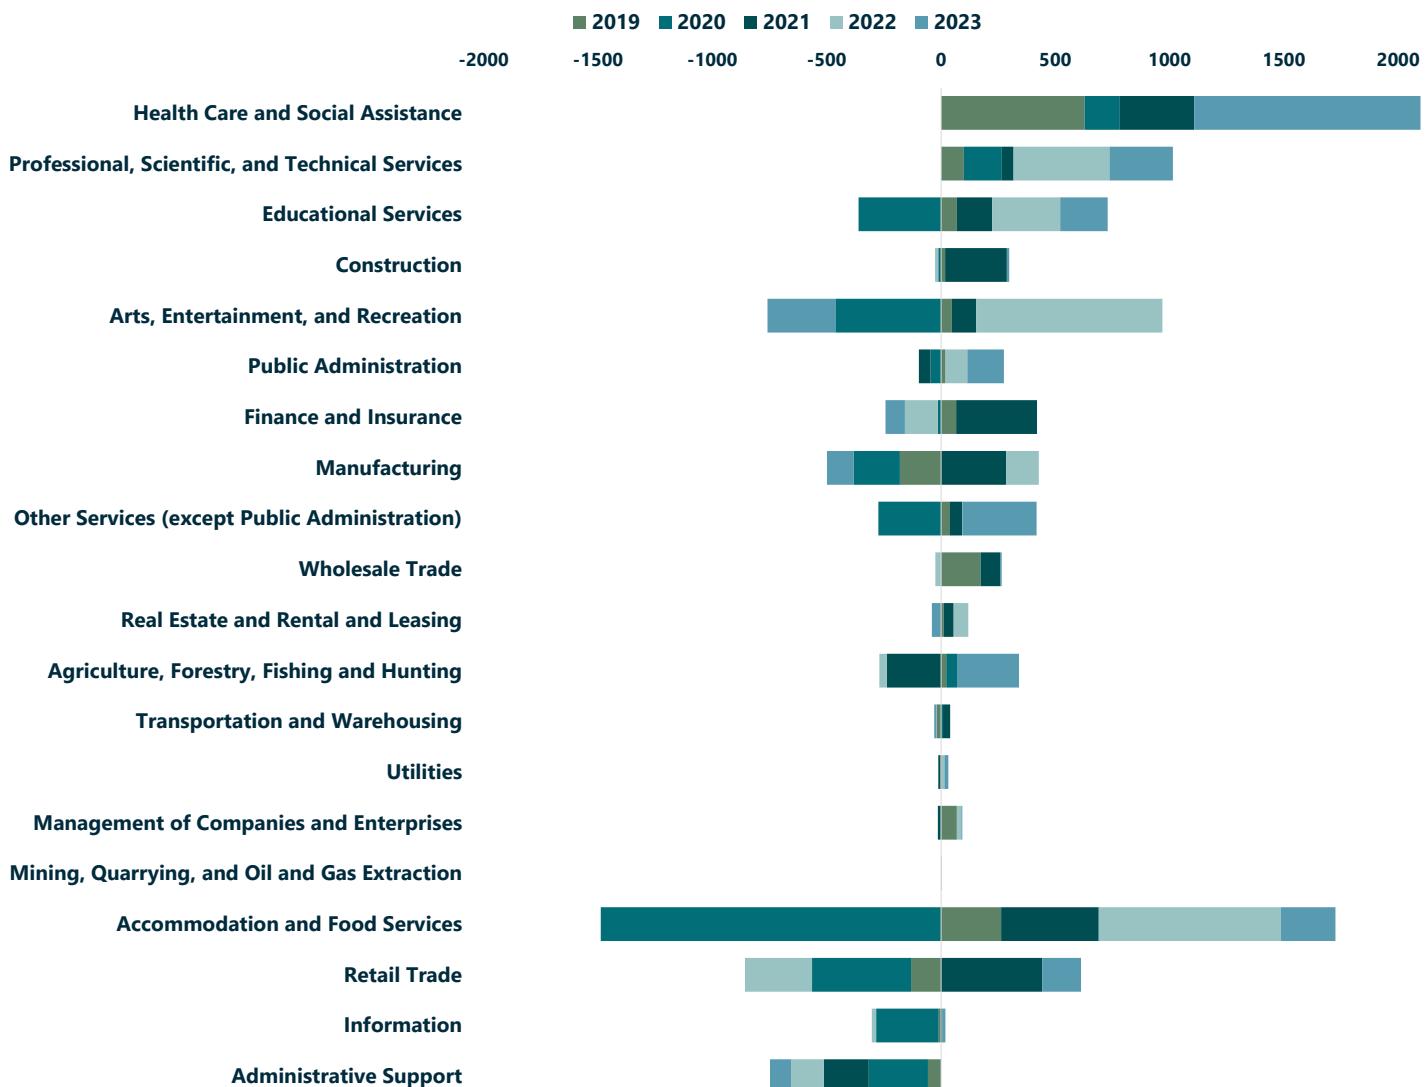

New business formation in Bend has seen a notable increase in high-propensity business applications and corporate filings since 2019. Since the pre-pandemic period, new business formations have increased by 50%, with a 10% rise between 2022 and 2023.

Business closures decreased by 62%, from 618 in 2019 to 232 in 2023. During the peak of the pandemic, 945 businesses closed, a 90% increase over the previous year. Despite these challenges, Bend has consistently experienced net positive business formation annually since 2016.

Healthcare remains the largest employment sector in Bend, accounting for over 12,400 jobs in 2023, or more than 20% of total employment. Retail, accommodation, food services, and entertainment are also major employment sectors.

Business Investments

Real Estate Markets Hold Steady, Remote Work Surges, & Commuting Patterns Shift

In 2024, Bend's average vacancy rates remained below the healthy benchmark of 5%, at 3.2%. This was primarily due to low vacancies in industrial and flex spaces (2.4%) and retail properties (4.1%).

Remote work, boosted by the pandemic and technology, has changed the national commercial real estate market, dropping demand for traditional office space. In 2024, about 25% of Bend's workforce was fully remote, and office vacancies averaged 5.7%.

Bend's workforce has shifted to commuting from outside communities. Approximately 52% of Bend's workforce commutes into the city, an increase from 47% in 2019. Nearly 29% of commuters originate from Central Oregon, while 22% travel from Portland.

Labor Force Participation Remains Stable & Education Attainment Grow

Bend's labor force participation rate has increased steadily since 2018, peaking at 68.1% in 2022, but participation declined slightly to 67.9% in 2023. Bend's labor force participation remains significantly higher than state and national averages.

The Bend MSA unemployment rate increased from 4.2% in December 2023 to 4.34% in December 2024. Since 2022, the area's average unemployment rate has been 4.09%, marginally lower than the national average of 4.34% but slightly higher than Oregon's average of 3.95%.

Bend has a highly educated populace with 56% having a bachelor's degree or higher – substantially higher than Oregon (38%) and the nation (15%).

Incomes Grow but Disparities Continue

Bend's median household income increased by \$23,130 (35%) between 2019 and 2023. Median income levels for both homeowners and renters have also grown since 2019. The median homeowner income was \$109,136 in 2023, \$28,351 more than in 2019. In comparison, renters saw their household income increase by \$18,193 (38%), lagging behind homeowners.

Although median household income increased by 35%, most of this growth is attributable to households earning \$100,000 or more. The number of households earning \$200,000 or more increased by 154% since 2019, while those earning between \$150,000 and \$199,999 grew by 53%.

Bend's income disparity has risen steadily between the top 5% and the lower 80% of households. In 2023, the lower 80% of households earned, on average, \$76,400 and accounted for 48% of the total income earned among all households. The top 5% earned eight times more, averaging \$608,000, and accounted for 24% of total income.

Housing Affordability Needed to Retain & Attract New Businesses & Talent

The high cost of living, especially in housing, is an increasing concern for employers and employees. As housing prices rise more rapidly than wages, many workers are compelled to relocate or commute long distances, exacerbating labor market constraints.

In 2024, the typical home sales price in Bend's 13 neighborhood districts was \$848,000, and the median rent exceeded \$1,800. Over one-third of households in Bend are cost-burdened, with 47% of renters and 25% of homeowners spending more than 30% of their income on housing.

Business Cost Burden is Also High

A significant challenge for Oregon businesses is the high cost of operations. The state consistently ranks among the highest nationally for overall tax burden. According to Oregon Business & Industries Oregon's tax burden is ranked second highest in the U.S., with Oregon's state business taxes increased by \$3.4 billion – 77% – between 2019 and 2023. * Local business owners frequently cite increasing property taxes, fees, and the corporate activity tax as primary concerns.

*Oregon Business & Industry Education Foundation

Data Gaps

Additional data is needed to help guide the City's economic development strategies. The economic development team will explore and identify data sources that can help inform and forecast tax revenue generation, employment sector growth and retraction and track efficacy of incentives in BURA and TIF areas.

Priority Industry Sector Analysis Overview

Based on an analysis conducted by Eco Northwest, including quantitative, qualitative, and strategic factors, four sectors were identified as priority clusters for business development. These sectors have a strong presence in Bend, Central Oregon, and the state, and demonstrate significant growth potential. Industries within these sectors include traded-sector businesses and other key enterprises. The full report is included in the appendices.

1. Craft Beverages & Specialty Products
2. Value-Added Manufacturing
3. Bio & Health Sciences
4. Outdoor Lifestyle and Products

Economic Plan Assumptions

Based on data analysis and stakeholder input, the following assumptions help inform the City's economic development plan. These assumptions incorporate the above data and analysis, along with stakeholder guidance. As the economy is a dynamic force, fluctuations will occur that are beyond our control, but with planning, monitoring data and economic strategies we can navigate these fluctuations.

Warning Signs for the 2026/27 Economy

Employment and revenue numbers for the State of Oregon and the U.S. are showing signs of strain. Unemployment is up, costs of living is higher and business growth in some sectors is slowing due to unpredictability of tariffs and consumption. Governor Kotek and Business Oregon (the state's economic development department) have both unveiled new strategies to help prepare for and address declining revenue and job growth. Additionally, predictability of costs and reliability due to tariffs, supply chain challenges and other factors bring uncertainty to business, impacting revenue, labor and predictability.

Retaining & Growing Businesses

As Bend and Central Oregon have been top job generating performers in the state for several years, there is a need to focus on retention and competitive value to retain this status. Land constraints, labor, infrastructure, distribution network needs, and rising

land, construction costs and permitting efficiencies, influence Bend's ability to attract and grow businesses. The City's economic program will include a small business retention strategy to ensure our city is welcoming to all, and the best place to start and grow a business.

Housing affordability & Availability is Key to an Inclusive Economy and a Thriving City

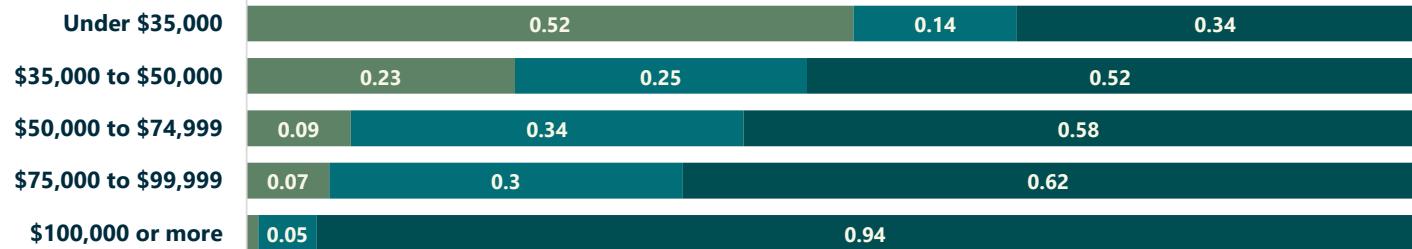

Another assumption is that our housing shortage will continue for the foreseeable future to ensure there is housing availability and affordability for everyone. The City has several initiatives toward meeting state housing production goals. Housing, affordability and a path to wage growth are connected and will continue to be a focus for Bend's economic program.

■ Severely Cost Burdened ■ Cost Burdened ■ Not Burdened

Renters

Owners

The Regional Economy

The Central Oregon Region is connected and interrelated. Each city showcases strengths and assets that contribute to a collective opportunity to retain, grow and attract business and economic activity. Combining our strengths and focus on attaining funding for infrastructure, workforce development, transportation and a stronger commercial and industrial base benefits us all as the fastest growing region in the state.

Focusing on Target Industries for revenue, high-value jobs and wage mobility

Emerging industry growth continues in health and bio sciences, outdoor product development, specialty food and beverages, and value-added manufacturing, also attracting an array of support businesses. Along with these target sectors, Bend's professional services, recreation and a myriad of other sectors will require labor and growth opportunities. Recruitment will focus on "right-sized" projects to Bend's market, land and labor availability.

Leveraging Urban Renewal

Urban renewal areas will continue to be a focus of investment and activity in generating housing, commercial and industrial growth. The performance of some of these areas has been uneven and will require an outcome-based investment strategy, including infrastructure and development investment from the City.

ECONOMIC DEVELOPMENT GOALS & STRATEGIES

Goal 1 - Retain, Grow, Recruit Business

Opportunity:

The City of Bend becomes known as a city of opportunity, where business from start-ups to long-standing are welcomed and supported, where innovation and creativity create new levels of opportunity. Bend is an integral part of the Central Oregon Region, where businesses thrive as a growing economic engine in the state.

Stakeholder feedback on this goal:

- Continue improving permitting, engineering and planning interactions with City
- Land and lease costs are high in Bend, and availability limited
- Supply chain is challenging and expensive
- Cost of doing business is high and continues to increase
- Labor supply for certain sectors is low and skill set requirements are changing
- Housing prices are high and there is not enough inventory – workforce is living elsewhere and commuting to Bend
- Childcare is unavailable or too expensive

Business Voices:

"A severe lack of knowledgeable tradesmen. As the current generation of skilled workers retires, some will close their businesses. There are fewer and fewer young folks entering the trades which will have a dire impact on construction. I hear this consistently throughout our industry."

"We need more housing affordability to attract quality workers. Working with the schools and colleges to enlighten young ones that the building trades are a viable option for a career needs to be done at a broader scale."

"The permitting process has improved but still needs to make strides. Delays in the workflow on top of the high cost of land creates real problems when we don't have any reasonable predictability in when we will be able to occupy the site and open for business."

Metrics:

- Net business loss/gain in Bend
- Unemployment statistics
- Lease occupancy and sales data
- Housing prices in Bend and surrounding cities
- Tariff increases/impacts on area businesses (survey)
- Tax & fee costs (Oregon Business & Industries)
- GDP for Bend and the Central Oregon Metropolitan Planning Area

- Small business grant awards & longevity of recipients
- Business retention/longevity

Strategy

- Develop & Implement a Business Retention Plan
- Small business support programs
- Alignment with new state economic and incentive strategies

Goal 2 - Build Resiliency

Opportunity:

Bend is known as prepared and secure in addressing natural disasters and economic challenges, changes in foundational factors of how we do business, and as having a future-ready workforce.

Stakeholder feedback on this goal:

- Develop a wildfire and natural disaster plan for businesses to cope with these events
- Develop resources to help businesses prepare for and survive economic fluctuations and downturns
- Help identify and prepare businesses and the local workforce for changes in skills needed for the future, and for the changing landscape being caused by AI and automation

Business Voices:

"AI, speed and analysis, intellectual efficiencies, tariffs, aging workforce, increased healthcare costs are all direct impacts to our business, we need more alignment in how to prepare as a region."

"The food industry is changing shape. Fewer staff, same output. Something has to give with the food and beverage industry, because we want to keep servicing our community and keeping our staff employed."

"Outdoor products could one day be completely gone in Bend if we don't plan accordingly. There are more and more pain points in distribution and continued challenges in workforce. Freight and distribution constraints require us to ship through the Port of Portland, increasing time and cost. 19% tariffs are anticipated to increase our costs by over \$1 million."

Metrics:

- Unemployment statistics from the state by sector or job type
- Visitor/recreation annual visits, and impacted visits and revenue from smoke – Visit Bend
- Number of smoke and adverse weather and winter recreation snow days per season

Strategy

- Economic, natural and workforce impact strategies

Goal 3 - Enable Inclusive Prosperity

Opportunity:

Bend is a place where anyone finds an affordable place to live, and a job, allowing them to live here comfortably. It is a city that nurtures a broad spectrum of opportunities and pathways to wealth-building and upward mobility. Bend is where a healthy diversity of businesses and employment opportunities thrive, along with the community who lives here.

Stakeholder Feedback:

- Affordability of Bend continues to decrease due to the cost of living
- Housing costs are too high for many to both live and work in Bend
- The wage gap between certain industry sectors and job market entry is increasing, with a need to identify career pathways to quality jobs and wage growth
- Access to city procurement needs to be more accessible to small and minority-owned businesses
- Under-represented and small businesses need access to expertise and capital

Business Voices:

"What our business needs support from the City of Bend with is access to workforce/affordable housing, mitigating taxes when possible and options for more flexible zoning to encourage new development. As it stands, none of these things are being accomplished from my perspective in the business community."

"I don't even know where to get started in contracting with the City. It seems like larger prime contractors don't have any reason to hire local subs, having more intentional coordination could help in keeping money in our community and bolstering our trades workforce."

Metrics:

- Employment data by industry sector/wage categories
- Housing and rent cost burden analysis
- Giniindex (The Gini index measures the extent to which the distribution among individuals or households within an economy deviates from a perfectly equal distribution.)
- Procurement award data
- Minority-owned business data – City business licenses and Milken Institute Report

Strategy

- Create more attainable housing
- Enable wage growth through upward mobility for the workforce
- Ensure more opportunities for small and under-represented businesses

Goal 4 - Plan For Growth

Opportunity:

Bend is a respected leader of forward-looking planning and preparation for the future. It is a

city that incorporates thoughtful use of residential, commercial and industrial properties into a plan to help fund the infrastructure, connectivity and sustainability that will enable businesses and the entire community to thrive.

Stakeholder Feedback:

- There is not enough industrial and commercial land availability
- We need to start the work to extend the Urban Growth Boundary (UGB) for housing, commercial and industrial use
- The cost of infrastructure is prohibitive as we bring in new land -we need new land to be developed in a timely manner
- Long term supply chain needs, such as improved freight transportation, storage, and supplier networks

Business Voices:

"We are incredibly excited to see the City take more of a direct role in strategic planning for economic development. We need a shared vision that is specific to Bend that we can all coalesce around that addresses our challenges and opportunities."

"There is virtually no industrial land available for the needs of my development. Even with the cost of land and construction, land availability is the most significant factor in moving a business for us."

"For smaller companies using a shared model of transportation and distribution can work, but once you reach mid-large scale market demand we feel like we spend an exorbitant amount of resources in getting our product out of Central Oregon. This comes with unreliability depending on the season and condition of our highway system."

Metrics:

- Regional industrial and commercial lands supply, including infrastructure assessment
- Economic inputs to Comprehensive Plan
- Housing inputs to Comprehensive Plan
- Construction and absorption rates of commercial and industrial lands

Strategy

- Include future economic needs in long-range planning, including commercial, industrial and micro-commercial uses and connected job centers

Goal 5 - Leverage, Build & Support Urban Renewal

Opportunity:

BURA will become thriving epicenters of blended development, where job centers and industry grow, along with housing and community spaces that are vibrant and connected.

Stakeholder Feedback:

- Generate more Tax Increment Finance (TIF) revenue through development

- City must stimulate development in the CORE area and Bend Central District (BCD)
 - City investments in vertical development
 - New staff (Q4 2026) to build business relations, recruit and assist with potential expansion and development projects
 - Leverage city-owned land for development
 - Complete full improvements to Franklin underpass
 - Build the Hawthorn overcrossing and landing areas for better accessibility
 - Micro-commercial assessment
- Bring more industrial property on-line at Juniper Ridge
 - Invest in infrastructure
 - Continue to recruit new industrial businesses

Business Voices:

"We need to look at a more innovative approach to incentivize job creation and wage increases. The current offerings from the state are not meeting the needs or even the business model of industries like ours (advanced manufacturing)."

"Private money follows public money. We need the Central District of Bend to be invested in from the City to meet the vision that our community has expressed we want to see happen as soon as possible."

Metrics:

- TIF annual and projected revenue
- Redevelopment activity (projects and acreage) from City and private sector
- City infrastructure project completion
- Business retention and attraction

Strategy

- Implement the BURA Investment Strategy for three urban renewal areas and TIF's
- Develop a plan for city properties
- Explore public/private partnerships for urban renewal projects

Measuring Progress on our Strategies

The economic development team will monitor key indicators and metrics on a macro scale as well as utilizing Bend and Central Oregon-specific indices.

Continued Data Monitoring

- Census Bureau
- Portland State University State population data
- Oregon Employment Department
- Implan
- CoStar
- Lightcast

Bend-Specific Indices

Workforce	Commuter patterns, housing counts, graduation rates, wages & income, cost of living vs wage growth (GINI index)
Business Growth	Permits & building activity, business tax revenue, employee counts, net business starts/closures, job growth by sector, commercial vacancy rates
City Economic Health	Property value split, available commercial & industrial land inventory
Regional Economic Indicators	Labor, population, infrastructure investments, transit use, and GDP
